

**School of Mechanical Engineering and Computer Science**  
**Mech 417 [M] Mechanical Systems Design II**

<b>Catalog Data:</b>	<b>Mech 417 Mechanical Systems Design II; 3 credits [M]</b> The second term of the year-long capstone design; integrative design in mechanical engineering; multidisciplinary design project considering both technical and non-technical contexts.
<b>Class Schedule:</b>	Three 50-minute lecture sessions per week, for one semester.
<b>Laboratory Schedule:</b>	None
<b>Prerequisites by Course:</b>	Mech 416, senior standing, and consent of academic coordinator
<b>Prerequisites by Topic:</b>	<ol style="list-style-type: none"> <li>1. Machine design</li> <li>2. Knowledge of all areas of engineering physics (thermodynamics, fluids, system theory, dynamics, statics, mechanics of materials, and material science)</li> <li>3. Design processes and practice</li> <li>4. Technical writing</li> </ol>
<b>Required Texts:</b>	None
<b>Course Coordinator:</b>	Dr. Linda (Xiaolin) Chen
<b>Course Objectives:</b>	<ol style="list-style-type: none"> <li>1. Mechanical systems design objectives—assign students a project that will allow them to integrate a majority of their skills acquired in the last four years regarding engineering, science, design, and communication.</li> <li>2. Learn how to conduct research and how to apply the knowledge gained in other classes to formulate and solve problems encountered in the practice of mechanical engineering.</li> <li>3. Work in groups on a sponsored project, and will design and realize thermal and mechanical components, systems, or processes to meet desired needs and realistic constraints.</li> <li>4. Learn a "customer" ethic in providing a deliverable and appropriate level of engineering service to their sponsor.</li> <li>5. Learn and demonstrate both oral and written engineering communication skills.</li> <li>6. Consider cost and time constraints (economic considerations) in execution of their design projects.</li> <li>7. Consider safety, ethical, and other societal constraints in execution of their design projects.</li> <li>8. Develop the capability to design and conduct experiments and to use modern engineering tools necessary for mechanical engineering practice.</li> </ol>
<b>Topics Covered:</b>	<ol style="list-style-type: none"> <li>1. Design sequence and project planning</li> <li>2. Engineering ethics, patent law, and negotiation skills</li> <li>3. Career paths</li> <li>4. Technical report writing</li> <li>5. Technical oral presentation</li> <li>6. Group dynamics</li> <li>7. Integration of skills and concepts developed in previous courses to find a design solution for an industrial project</li> </ol>

<b>Lab Experiments and Activities:</b>	None		
<b>Course Outcomes:</b>	Students will be able to:		
	<b>Assessed for Program Outcomes</b>	C-1. Analyze needs to produce problem definition for thermal and mechanical systems. C-2. Carry out design process (such as concept generation, modeling, evaluation, iteration) to satisfy project requirements for thermal and mechanical systems. C-3. Work within realistic constraints (such as economical, environmental, social, political, manufacturability, health and safety, ethical, and sustainability) in realizing systems. C-4. Build prototypes that meet design specifications. D-1. Share responsibilities and information on schedule with others on the team. D-2. Participate in the development and selection of ideas. F-2. Interact with industry. G-1. Produce a variety of documents, particularly project proposals, using appropriate formats, grammar, and mechanics with discipline-specific conventions including citations. G-2. Plan, prepare, and deliver well-organized, logical oral presentations; explain when questioned.	
	<b>Other</b>	E-2. Develops appropriate models to formulate solutions. E-3. Use analytical, computational, and/or experimental methods to obtain solutions. I-1. Find, evaluate & use resources to learn new material not taught in class. K-1. Operate engineering equipment for projects. K-3. Use solid modeling software for engineering applications. K-4. Analyze engineering problems using software tools.	
<b>Required or Elective Course:</b>	Required		
<b>Contribution to Professional Component:</b>	Engineering Topics		
<b>Relationship of Course to Program:</b>	Meets: Educational Objectives <u>1, 2, 3, 4</u> Program Outcomes <u>C, D, E, F, G, I, K</u>		
<b>Prepared by:</b>	Dr. Linda (Xiaolin) Chen	Date:	October 10, 2008
<b>Approved by CAC:</b>
